- Stacking functionality for fleet/centre use

WHITEOUT

It would be hard to walk past a Scooter X without wanting a second look. Improved footrests give a variety of paddlers good bracing positions whilst our WhiteOut SOT seat with seat pad and backrest provides comfort and support. The new design also gives the Scooter X the capability of stacking one Scooter X on top of another - this will make transporting or storing multiple Scooter X's easier and more secure.

Storage is improved with a large rear tank well including purpose designed fixings for lashing down your kit. Our screw hatch now has a moulded in bucket under the cover and has been moved close to the paddler to give easy access and increased protection from waves. All new purpose designed deck fittings complete the look of the stunning Scooter X.
